J. BALO. Chem. 266:10739-10742(1991).
-!- FUNCTION: PPIASES ACCELERATE THE FOLDING OF PROTEINS.
-!- CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.
-!- ENZYME REGULATION: CYCLOSPORIN A (CSA) INHIBITS CYPB.
-!- SUBCELLULAR LOCATION: ENDOPLASMIC RETICCHLUM LUMEN (BY SIMILARITY).
-!- SIMILARITY: BELONGS TO THE CYCLOPHILIN-TYPE PPIASE FAMILY.
           (ROTAMASE) (CYCLOPHILIN B) (S-CYCLOPHILIN) (SCYLP).
Gallus gallus (Chicken).

Sequence of cyclophilin (cyppfl) gene of Plasmodium falciparum
"Sequence of cyclophilin (cyppfl) gene of Plasmodium falciparum
(isolate FCCI/HN).";
Submitted (AUG-1999) to the EMBL/GenBank/DDBJ databases.
-! FUNCTION: PEPTIDYL-PROLYL CIS-TRANS ISOMERASES ACCELERATE THE
FOLDING OF PROTEINS (BY SIMILARITY).
-! CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC
PEPTIDE BONDS IN OLIGOPEPTIDES.
-! SIMILARITY: BELOMOS TO THE CYCLOPHILIN-TYPE PEPTIDYL-PROLYL CIS-
TRANS ISOMERASE FAMILY:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Renucci M., Tirard A., Matarazzo V., Belaich A., Clement J.L.;
"Isolation of a cDNA sequence encoding a peptidy1-proly1 cis-trans isomerase from Periplaneta americana antennae.";
Submitted (JAN-1998) to the EMBL/GenBank/DDBJ databases.
-!- PUNCTION: PEPTIDV1-PROLYL CIS-TRANS ISOMERASES ACCELERATE THE FOLDING OF PROTEINS (BY SIMILARITY).
-!- CATALTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.
-!- SIMILARITY: BELONGS TO THE CYCLOPHILIN-TYPE PEPTIDYL-PROLYL CIS-TRANS ISOMERASE FAMILY.
                                                                                                                                                                                                                                                   Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Cricetinae; Mesocricetus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             01-MAY-2000 (TrEMBLrel, 13, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic
               This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and

The invention relates to a composition for modulating somatolactogenic function, comprising cyclophilin B (CypB), a mutant of cyclophilin B (particularly a CypB mutant in which residues 2-12 of the mature protein are absent) or an inhibitor of the interaction of cyclophilin B with a somatolactogenic hormone (e.g., prolactin, growth hormone). The Invention also relates to a method of identifying inhibitors of somatolactogenic functions using CypB and a somatolactogenic hormone, and method for diagnosing diseases associated with abnormal somatolactogenic functions by assessing CypB levels in a sample from a patient. Cyclophilin B is useful for augmenting somatolactogenic functions useful for augmenting somatolactogenic functions useful for augmenting somatolactogenic function in the animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cyclophilin B mutent or a composition comprising an inhibitor of the interaction of cyclophilin B with a somatolactogenic hormone, is useful for inhibiting somatolactogenic function in the animal. A composition comprising cyclophilin B is useful in the treatment of immunosuppression, in the treatment of short stature, muscle wasting and osteoporosis. A composition comprising cyclophilin B mutant or a composition comprising an inhibitor of the interaction of cyclophilin B with a somatolactogenic hormone, is useful for treating HIV infection, breast and prostate cancer, glgantism/acromegaly, and hyperprolactineemia. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  represents a human cyclophilin B C-terminal mutant, CypB-AIAKE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel composition for modulating somatolactogenic function, comprises cyclophilin B, its mutant or an inhibitor of interaction of cyclophilin B with somatolactogenic hormone .
                                                                                                                                                                                                                                                                                                                        Human cyclophilin B; CypB; prolactin-binding; growth hormone-binding; somatolactogenic function modulator; immunosuppression; short stature; muscle wasting; osteoporosis, HIV infection; breast cancer; prostate cancer; gigantism; acromegaly; hyperprolactinaemia; C-terminal deletion mutant; mutein.
                                                                                                                                                                                                                                                                                      Human cyclophilin B (CypB) C-terminal deletion mutant, CypB-AIAKE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Note: The present sequence is not shown in the specification, but is derived from the wild-type CypB sequence shown on pages 17-18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 211;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score 71; DB 22;

The invention also relates to a method of identifying inhibitors of somatolactogenic dinctions using CypB and a somatolactogenic hormone, and method for diagnosing diseases associated with abnormal somatolactogenic functions by assessing CypB levels in a sample from a patient. Cyclophilin B is supplying the patient of the animal, and is a second to the animal of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cyclophilin B mutant or a composition comprising an inhibitor of the interaction of cyclophilin B with a somatolactogenic hormone, is useful for inhibiting somatolactogenic function in the animal. A composition comprising cyclophilin B is useful in the treatment of immunosupression, in the treatment of short stature, muscle wasting and osteoporosis. A composition comprising cyclophilin B mutant or a composition comprising an inhibitor of the interaction of cyclophilin B with a somatolactogenic hormone, is useful for treating HIV infection, breast and prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel composition for modulating somatolactogenic function, comprises cyclophilin B, its mutant or an inhibitor of interaction of cyclophilin B with somatolactogenic hormone -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a composition for modulating somatolactogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human cyclophilin B; CypB; prolactin-binding; growth hormone-binding; somatolactogenic function modulator; immunosuppression; short stature; muscle wasting; osteoporosis; HIV infection; breast cancer; prostate cancer; gigantism; acromegaly; hyperprolactinaemia.

include: Cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiasthmatic; antialeragic; antidathritic; antidiabetic; antiasthmatic; antialeragic; antibacterial; antiviral; dermatcological; neuroprotective; cardiant; thrombolytic; coaquiant; nootropic; vasotropic; antipsoriatic and antiangiogenic. The polynucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Polynucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoletic cells, autoimmune disorders, alleragic reactions, graft versus host disease and organ effection, modulate haemostatic or thrombolytic activity, modulate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     inflammation, cancers, cardiovascular disorders, neurological disease and bacterial or viral infections. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in drug screens. AAC78449 to AAC78457 and AAB44240 represent sequences used in the exemplification of

The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytocoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

Patent No. 5968802

GENERAL INFORMATION:

APPLICANT: Player, Joseph
APPLICANT: Player, Joseph
APPLICANT: Payan, Donald
TILE OF INVENTION: No. 5968802el Nuclear Cyclophilin
MUMBER OF SEQUENCES: 21
CORRESPONDENCE ADDRESS:

ADDRESSEE: Flehr, Hohbach, Test, Albritton
ADDRESSEE: & Herbert
STREET: Four Embarcadero Center, Suite 3400

CITY: San Francisco
STATE: California
COUNTRY: United States
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          COMPUTER FRADABLE FORM:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sequence 12, Apsequence 12, A sequence 15, A sequence 13, A sequence 13, A sequence 14, A sequence 14, A sequence 14, A sequence 9, Apsequence 9, Apsequence 9, Apsequence 8, Apsequence 8, Apsequence 8, Apsequence 20,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 11,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NECOLITY 15

Sequence 15, Application US/08451747

Sequence 15, Application US/08451747

Patent No. SB1107

APPLICANT: CARLOW, CLOTILDE K.S.

APPLICANT: PAGE, ANTON:

TITLE OF INVENTION: METHOD FOR IDENTIFYING ANTI-PARASITIC

TITLE OF INVENTION: COMPOUNDS

NUMBER OF SEQUENCES: 21

CORRESPONDENCE ADDRESS:
                                                                                                                                                                         US-08-145-995A-15

1. FUNCTION: PPIASES ACCELERATE THE FOLDING OF PROTEINS.

1. CATALYTIC ACTIVITY: CIESTRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLGOPEPTIDES.

1. ENZYME REGULATION: CYCLOSPORIN A (CSA) INHIBITS CYPC.

1. SUBCELLULAR LOCATION: CYTOPLASMIC.

```
CYCLOPILIN and its expression in Escherichia coli.";

Mol. Biochem. Parasitol. 75:99-111(1995).

-! FUNCTION: PPLASES ACCELERATE THE FOLDING OF PROTEINS.

-! CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.

-! ENZYME REGULATION: CYCLOSPORIN A (CSA) INHIBITS CYPB.

-! SUBCELLULAR LOCATION: ENDOPLASMIC RETICULUM LUMEN (BY SIMILARITY).

-! BEVELOPMENTAL STAGE: THIS SOLUBLE PROTEIN IS PRESENT IN ABUNDANCE IN THE ADULT WORM AS WELL AS IN THE SCHISTOSOMULA AND THE EGGS.

-! SIMILARITY: BELONGS TO THE CYCLOPHILIN-TYPE PPLASE PAMILY.
                                                                                                          Schistosoma mansoni (Blood fluke).
